Investor-Level Business Plan

Executive Summary

Retail Data Engineering provides cloud data pipelines, analytics automation, and AI-driven insights specifically for Australian retail stores. With a hybrid onshore–offshore team model, we deliver enterprise-grade data engineering at SME pricing. Our focus is on POS → cloud data ingestion, Snowflake warehousing, automated dashboards, and retail forecasting.

Market Opportunity

Over 150,000 retail businesses in Australia still rely heavily on Excel for reporting. POS systems generate data but lack analytics capabilities. The demand for automated dashboards, AI-based forecasting, and cloud data engineering continues to grow. Our niche focus gives us a competitive advantage.

Business Model

We operate on recurring monthly subscriptions ($399–$1299) and one-time project fees ($3,000–$50,000). Retailers receive data pipelines, forecasting models, and dashboards. Our India-based engineering team ensures high margins and scalability.

Services Offered

- POS → Cloud ETL - Retail Data Warehousing - Automated Dashboards - Inventory & Demand Forecasting - Customer Analytics - AI Insights

Financial Forecast

Year 1 Revenue Projection: $120k–$150k Year 2 Projection: $250k–$350k Year 3 Projection: $500k+ with multi-store franchise clients. High scalability through offshore engineering support.

Competitive Advantage

Our retail-only focus, India engineering team, AI-ready stack, and rapid deployment capability provide a strong differentiation over general IT firms.

Investment Requirements

We seek $30,000–$50,000 to accelerate marketing, build integrations with top POS systems, and expand our AI forecasting models.
